

## NESTABLE CATCH BASIN WITH INTEGRAL DEBRIS TRAP

### ABSTRACT OF THE DISCLOSURE

A catch basin for draining water into an underground drainage conduit through a riser  
5 includes a receptacle having an open top and a base portion; an integral outflow conduit  
extending upwardly from an outlet opening in the base portion and having an inlet opening  
within the receptacle; and a trough in the receptacle that extends along a side of the base and  
below the level of the inlet opening to provide a trap for debris contained in water flowing into  
the receptacle. The receptacle tapers inwardly from top to bottom, so that a first receptacle can be  
10 nestably stacked in a second receptacle.
